REPORT NO. SO-41847

1. On 2 May 1950, at four o'clock in the morning, an explosion occurred in the meteorological station of the Borongaj airfield that reportedly destroyed the warehouse containing synoptic files, instruments, and special theodolites. It is suspected that the explosion was intended to affect the warehouse where the hydrogen cylinders are stored that are used to inflate balloons.
2. Although attempted sabotage was reportedly suspected, the airfield command issued a communique to the effect that the explosion was caused through tampering with hydrogen.
